322 Pedestrian Safety Enhancements

**Location:**
Main Campus, Glassboro

**Status:**
Planning

**Forecast Project Delivery:**
Summer 2020

**Development Cost:**
$350,000

**Design Consultants:**
Ground Reconsidered

**General Contractor:**
To be determined

**Project Planning & Development:**
Division of Facilities, Planning & Operations

**Description**

The Route 322 corridor separates the North and South sections of Rowan University’s Main Glassboro campus, and serves as an East to West corridor for pedestrian and vehicular traffic. The project’s focus is to reduce pedestrian and vehicular conflict, and control access at crosswalks by enhancing safety precautions along the North to South access points. This first phase creates engaging experience and includes the introduction of safety barriers, gathering nodes, enhanced bus and shuttle drop off locations and opportunities to create human scale along the stretch of campus.
