Linden Hall Demolition

**Location:**
Main Campus, Glassboro

**Status:**
Relocation of fiber optics

**Forecast Project Delivery:**
August 2018

**Development Cost:**
$2 million

**Design Consultants:**
Langan Engineering

**General Contractor:**
To be determined

**Project Planning & Development:**
Division of Facilities, Planning & Operations

**Description**
Linden Hall is a 2-story masonry building purposed in 1954 as a women’s dormitory. Combined Renovation/Remediation costs exceeded its value, so it has now been taken out of service.

Phase 1 of the demolition project was completed during the summer of 2017 - which included the complete remediation of all contaminating articles in accordance with EPA Regulations.

Phase 2 of the demolition project requires the relocation of the University’s main fiber optic trunk that runs through its core. This work is scheduled to begin during Christmas Break, with termination and testing of all fiber strands through March 2018.

Phase 3 of the demolition project (demolition of the structure) will be completed during the summer of 2018.

Plans are also underway to convert the demolished area into much needed parking for the North side of the Campus.
