This product is a herbicide that provides control of crabgrass, other annual grasses, and broadleaf weeds in established lawns and ornamental turfs, including golf course fairways, roughs, and tee boxes. It contains LESCO® Poly Plus® Sulfur Coated Urea to provide a uniform growth with extended nitrogen feeding.

**Applications of this product:**

- **When applied as directed under these use directions, the following turfgrass species that have been determined to be tolerant to this product may be used on seeded, sodded, or sprigged lawns and ornamental turfs**

**Use of this product on certain varieties of Creeping Bentgrass, such as 'Coastline', 'Carmen', 'Seacliff', and 'Washington' may result in undesirable turfgrass injury. Not all varieties of Creeping Bentgrass have been tested.

**DO NOT apply this product to Colonial Bentgrass (Agrostis tenax) varieties.

**Use of this product on certain varieties of Fine Fescue may result in undesirable turf injury. The following Fine Fescue varieties have been found to be sensitive to this product: 'Atlanta', 'Barron', 'Beau', 'Bijet', 'CF-2', 'Enjoy', 'HF-67', 'Highland', 'Jamestown', 'Kafir', 'Majenta', 'Mary', 'Pennlawn', 'Tamarac', 'Tatiana', 'Waldorf', and 'Wisconsin'. Not all varieties of Fine Fescue have been tested.

**DO NOT use this product on seedling Buffalograss in the spring of the first year of establishment until the turfgrass is fully green and has established new roots.

**Reseeding, Overseeding, or Sprigging**

Reseeding, overseeding or sprigging of treated areas with this product should be delayed until 12 weeks from the time of application. Reseeding, overseeding or sprigging before 12 weeks after application may prevent establishment of desirable turfgrasses. When reseeding or overseeding, proper cultural practices such as soil cultivation, irrigation and fertilization should be followed. However, if overseeding with perennial ryegrass in the fall, overseed 8 weeks or later after a single application.

For best results, use mechanical or power seeding equipment (sill seeders) designed to give good seed to soil contact.

**Precautionary Statements**

**Hazard to Humans and Domestic Animals**

- **Caution! Causes eye irritation. Harmful if inhaled. Avoid contact with eyes or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reusing.**

**Environmental Hazards**

- This product is toxic to fish and highly toxic to other aquatic organisms including oysters and shrimp. Use with care when applying to turf areas adjacent to any body of water. Dust and runoff from treated turf may adversely affect aquatic organisms in adjacent aquatic sites. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters.

**Directions for Use**

- It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

**General Information**

This product is a herbicide that provides control of crabgrass, other annual grasses, and broadleaf weeds in established lawns and ornamental turfs, including golf course fairways, roughs, and tee boxes. This product will not harm nearby established ornamentals when used according to label directions.

This product may be used on seeded, sodded, or sprigged lawns and ornamental turfs that are well-established. The grass must have developed a good root system and a uniform stand, and have received at least two mowings following its seeding, sodding, or sprigging before it can receive its first application of this product. Use of this product on lawns and ornamental turfs that are not well-established, or on those that have displayed its fifth leaf or first tiller. For best results, cultural practices that have been tested.

**Reseeding, Overseeding, or Sprigging**

Re-seeding, re-seeding or re-sprigging of treated areas with this product should be delayed until 12 weeks from the time of application. Reseeding, overseeding or sprigging before 12 weeks after application may prevent establishment of desirable turfgrasses. When reseeding or overseeding, proper cultural practices such as soil cultivation, irrigation and fertilization should be followed.

However, if overseeding with perennial ryegrass in the fall, overseed 8 weeks or later after a single application.

For best results, use mechanical or power seeding equipment (sill seeders) designed to give good seed to soil contact.

**Use Precautions**

- **Not for use on Golf Course Putting Greens.**
- **The early post-emergence crabgrass control described below is limited. Post-emergence applications are only effective on crabgrass if applied before crabgrass has displayed its fifth leaf or first tiller. For best results, cultural practices that disturb the soil, such as core-, spike-, or hydro-aerification, and verticutting, should be done before application of this product. DO NOT apply this product until the grass has recovered from these cultural practices.**
- **Apply this product directly to established lawns or ornamental turfs only.**
- **DO NOT apply to flowers, vegetables, shrubs, or trees.**
- **DO NOT use dippings from treated turf for mulching around vegetables or fruit trees.**
- **DO NOT apply this product to pastures. Keep people and pets off treated areas until dust has settled.**

APPLICATION DIRECTIONS - Control of Crabgrass

Pre-emergence and Early Post-emergence Control

This product provides "pre-emergence" control of crabgrass (including the large, smooth, and southern crabgrass species) when applied prior to the emergence of crabgrass. The use of this product is considered to be pre-emergence or early post-emergence at the time of the application. The duration of residual weed control provided by this product is directly related to the total rate applied, but will vary depending on weather, weed pressure, turf quality, and the user's location within a region.

Do NOT apply more than 7.65 lb of this product per 1,000 sq ft per application, and no more than 22.95 lb of this product per 1,000 sq ft per year.

Application Frequency and Timing

This product may be applied as a single application, as a split application, or as a sequential application for crabgrass control in the spring, summer, or fall. Where a fertilizer application is planned, the spreader should be calibrated according to the equipment manufacturer's directions for calibrating the spreader settings such that the spreader delivers the appropriate application rate recommended above. Apply this product uniformly over the lawn or ornamental turf area. A more uniform application can be made by spreading half of the required rate over the lawn or ornamental turf area and then applying the remaining half at a right angle to the previous direction. Avoid streaking, skips, or overlaps during application. Check equipment frequently to ensure equipment is functioning properly and applying uniform distribution of granules.

Fall Applications

Use this product for crabgrass control through the early part of the next spring. This product will also control (at the "Program 3" rates) the following weeds when applied prior to their emergence:

bluegrass (annual)  
cloudy (annual)  
creeping bentgrass (annual)  
lolium (yellow & green)  
grasses (other)  
kikuyugrass  
southwest (corn)  
muhlenbergia  
heliotropan  
primrose

Also controlled at the "Program 2" rates:

APPLICATION DIRECTIONS - Control of Other Grasses and Broadleaf Weeds

Spring Application

Used as directed for crabgrass control in the spring, this product will also control (at the "Program 3" rates) the following weeds when applied prior to their emergence:

bluegrass (annulare)  
cloudy (annual)  
lolium (yellow & green)  
goosegrass  
kikuyugrass  
southwest (corn)  
muhlenbergia

Also controlled at the "Program 2" rates:

Fall Applications

Used as directed for late summer or early fall use, for crabgrass control through the early part of the next spring, this product will also control (at the "Program 3" rates) the following weeds when applied prior to their emergence:

bluegrass (annulare)  
cloudy (annual)  
lolium (yellow & green)  
goosegrass  
kikuyugrass  
southwest (corn)  
muhlenbergia

Also controlled at the "Program 2" rates:
